

BeaconMedaes Shanghai Enhancing On-Site Service Quality to Strengthen Medical Safety

September 2026- BeaconMedaes Shanghai is dedicated to delivering high-quality service to the hospitals while growing the business, and have recently upgraded the routine inspection process, introducing a new medical gas quality testing service to provide more meticulous, professional on-site support, reinforcing the safety lifeline of hospitals.

Inspection System Upgrade

There are three key improvements:

- Expanded checklists for quality-assurance-level functional checks on each device.
- Redesigned reports with richer data and intuitive layouts for easier equipment status assessment.
- Comprehensive staff training to enhance field service professionalism and proactive equipment care.

These enhancements enable earlier risk detection, greater operational reliability, and tangible safety value for the customers.

New Gas Quality Testing Service

Medical gases are vital to patient outcomes, but equipment performance can gradually decline due to aging and environmental factors. BeaconMedaes Shanghai has launched a new on-site testing service that strictly complies with and even exceeds China's GB 50751-2012 standard. 50751-2012 also, incorporates international best practices from HTM (UK) and NFPA (US) to ensure broader coverage and stricter evaluation.

The detailed report, covering plant rooms, operating environment, terminals, etc. helping hospitals shift from reactive repairs to predictive maintenance – extending equipment life and avoiding sudden failures.

Pilot and Nationwide Expansion

BeaconMedaes Shanghai have already piloted these services at ten hospitals in China, receiving positive feedback. Going forward, BeaconMedaes Shanghai plan to roll them out across the country. Staying true to the principle – “Life is in the details” – BeaconMedaes Shanghai will

Life is in the details

continue to refine the offerings and safeguard medical equipment and patient safety in more institutions.

Hong Bin Wang, Medical Gas Service Business Line Manager of Shanghai BeaconMedaes Medical Gas Co., Ltd said: "BeaconMedaes service team has always upheld innovation and professionalism as its standards in serving customers, fulfilling its mission of safeguarding medical safety through consistently reliable on-site services."
